Art Unit: 1724

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 7-11 and 36 are rejected under 35 U.S.C. 103 (a) as being unpatentable over Sargent et al. 5,234,466. Sargent et al. disclose (see col. 1 lines 54-61 and col. 3 lines 4-13) a method for adjusting the pH of a process stream or solution of a papermaking process substantially as claimed. The claims differ from Sargent et al. by reciting that the process stream is not a bleaching solution, and includes a group of process streams excluding a bleaching solution. It is submitted that the disclosure of Sargent et al. does not appear to be limited to bleaching solutions, and appears to include the treatment of any process stream where acid has been traditionally used. It would have been obvious to one skilled in the art to modify the method of Sargent et al. by adding urea sulfate to the recited process streams, to aid in adjusting the pH of the process streams.
- 3. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lindstrom et al. in view of Sargent et al. 5,234,466.. Lindstrom et al. (see col. 1 line 55 through col. 2 line 60) disclose that it is known in the art to regulate the pH value of a

Art Unit: 1724

papermaking process solution with aluminum sulfate. The claims differ from Lindstrom et al. by reciting the addition of urea sulfate. Sargent et al. disclose (see col. 1 lines 54-61 and col. 3 lines 4-13) that it is known in the art to decrease the amount of acid required by a papermaking process, or adjust the pH of a process stream or solution of a papermaking process stream by the addition of urea sulfate. It would have been obvious to one skilled in the art to modify the method of Lindstrom et al. by addition of urea sulfate in view of the teachings of Sargent et al., to aid in adjusting the pH of the stream or solution.

- 4. Applicants argue that nothing in Sargent et al. teaches or suggests the use of urea sulfate in any other aspect of a pulping or papermaking process, except for reducing pulp degradation in the bleaching stages, and therefore Sargent et al. fails to teach the elements of claim 7. It is submitted that the disclosure of Sargent et al. (see col. 3 lines 4-15) does not appear to be limited to bleaching solutions, and appears to include the treatment of any process stream where acid has been traditionally used.
- 5. Applicants argue that there is no motivation to combine Lindstrom which discloses the use of alum in a papermaking process, and Sargent et al. which discloses the use of urea sulfate in textile processing. It is noted that Lindstrom discloses that aluminum sulfate is traditionally added to paper production stocks or streams to improve filler retention and regulate pH values. It is further noted that Sargent et al. is not limited to

Art Unit: 1724

textile processing and includes motivation for adjusting the pH of paper manufacturing streams with urea sulfate to reduce corrosion on metal equipment. It would have been obvious to one skilled in the art having the references before him, to modify the method of Lindstom by addition of urea sulfate in view of the teachings of Sargent et al., to aid in regulating the pH of the papermaking streams, absent a sufficient showing of unexpected results.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
